ARCH - DESIGNING CISCO NETWORK SERVICE ARCHITECTURES V3.0

Course Code: 3045

Gain the knowledge necessary to design converged enterprise networks and learn additional concepts including enterprise campus, data center, e-commerce, IP addressing and routing, security solutions, VPNs, IP multicast, and security in a borderless cloud environment.

EXCLUSIVE TO GLOBAL KNOWLEDGE - Accelerate your Cisco learning experience with complimentary access to the IT Skills Video On-Demand Library, Introduction to Cybersecurity digital learning course, course recordings, IT Resource Library, and digital courseware.

Learn more

In this course, you will learn the conceptual, intermediate, and detailed design of a network infrastructure that supports desired network solutions over intelligent network services in order to achieve effective performance, scalability, and availability. This is an advanced course designed for CCNA and CCDA certified personnel, or those with equivalent experience in routing and switching Cisco networks. You will learn how to apply Cisco network solution models and recommended design practices, to provide viable and stable enterprise internetworking solutions.

Additionally, you will learn the concepts that are necessary to design converged enterprise networks. You will also cover enterprise campus, data center, e-commerce, IP addressing and routing, security solutions, VPNs, IP multicast, and security in a borderless cloud environment.

What You'll Learn

• Cisco network architectures for the Enterprise and how this Cisco design methodology addresses enterprise network needs for performance, scalability, and availability
• Advanced Cisco structured design principles building on the concepts covered
in DESGN 3.0
• Enterprise campus network designs
• Enterprise data center Integration
• Enterprise edge and remote user infrastructure designs
• Designing security services
• VPN designs
• Designing for high availability (HA)
• Advanced EIGRP, OSPF, and IS-IS routing
• BGP routing
• WAN design
• SDN and APIC-EM (designing software defined networks)
• Transitioning to IPv6
• Designing IP multicast

Who Needs to Attend
• Individuals seeking the CCDP certification and those working toward the CCDE certification
• Pre- and post-sales network engineers that are involved in network design, planning, and implementation
• Network administrators and designers that are responsible for designing and implementing the enterprise network
• CCDP and CCDE candidates

Prerequisites
• Good understanding of the underlying technical principles for advanced network designs
• CCDA and CCNA certifications are recommended
• Familiarity with internetworking technologies, Cisco products, and Cisco IOS features
ARCH - DESIGNING CISCO NETWORK SERVICE ARCHITECTURES V3.0

Course Code: 3045

Classroom Live Outline

1. Enterprise Connectivity and High-Availability
   - EIGRP OSPF
   - IS-IS

2. BGP Design
   - IBGP
   - BGP Communities
   - Load Sharing

3. Wide Area Network Design
   - Service Provider Managed VPNs
   - Enterprise Managed VPNs
   - WAN Resiliency Design
   - Campus Edge and Connectivity to Partners
   - SDN and APIC-EM

4. Enterprise Data Center Integration
   - Modular and Scalable Data Center Network
   - Multi-Tenant Data Center
   - Data Center Interconnections
   - Data Center Traffic Flows
   - SDN and APIC-DC

5. Designing Security Services
   - Overview
   - Designing Infrastructure Protection
   - Firewall and IPS Solutions
   - Network Access Control Solutions

6. Design QoS for Optimized User Experience
• Overview
• Recommended QoS Design Principles
• Campus QoS
• Data Center QoS
• WAN QoS
• MPLS VPN QoS
• IPSec VPN QoS

7. Transition to IPv6
• Deploying IPv6 Challenges

8. IP Multicast Design
• Defining MCAST Trees and Forwarding
• PIM Sparse Mode
• Rendezvous Point Distribution Solutions
• IP Multicast Security

Case Studies

Case Study 1: Design Enterprise Connectivity
Case Study 2: Design Enterprise BGP Network with Internet Connectivity
Case Study 3: Design Resilient Enterprise WAN
Case Study 4: Design Enterprise Data Center Connectivity
Case Study 5: Design a Secure Network
Case Study 6: Design QoS in the Enterprise Network
Case Study 7: Design an Enterprise IPv6 Solution

Note: In the Classroom course, case studies will be team exercises. In the Virtual course, case studies will be individual exercises.
Virtual Classroom Live Outline

1. Enterprise Connectivity and High-Availability
   - EIGRP OSPF
   - IS-IS

2. BGP Design
   - IBGP
   - BGP Communities
   - Load Sharing

3. Wide Area Network Design
   - Service Provider Managed VPNs
   - Enterprise Managed VPNs
   - WAN Resiliency Design
   - Campus Edge and Connectivity to Partners
   - SDN and APIC-EM

4. Enterprise Data Center Integration
   - Modular and Scalable Data Center Network
   - Multi-Tenant Data Center
   - Data Center Interconnections
   - Data Center Traffic Flows
   - SDN and APIC-DC

5. Designing Security Services
   - Overview
   - Designing Infrastructure Protection
   - Firewall and IPS Solutions
   - Network Access Control Solutions

6. Design QoS for Optimized User Experience
• Overview
• Recommended QoS Design Principles
• Campus QoS
• Data Center QoS
• WAN QoS
• MPLS VPN QoS
• IPSec VPN QoS

7. Transition to IPv6
   • Deploying IPv6 Challenges

8. IP Multicast Design
   • Defining MCAST Trees and Forwarding
   • PIM Sparse Mode
   • Rendezvous Point Distribution Solutions
   • IP Multicast Security

Case Studies

Case Study 1: Design Enterprise Connectivity
Case Study 2: Design Enterprise BGP Network with Internet Connectivity
Case Study 3: Design Resilient Enterprise WAN
Case Study 4: Design Enterprise Data Center Connectivity
Case Study 5: Design a Secure Network
Case Study 6: Design QoS in the Enterprise Network
Case Study 7: Design an Enterprise IPv6 Solution

Note: In the Classroom course, case studies will be team exercises. In the Virtual course, case studies will be individual exercises.

Nov 4 - 8, 2019 | 8:30 AM - 4:30 PM EST
Dec 16 - 20, 2019 | 8:30 AM - 4:30 PM EST
Jan 13 - 17, 2020 | 9:30 AM - 5:30 PM EST
Jan 27 - 31, 2020 | 8:30 AM - 4:30 PM EST
Feb 17 - 21, 2020 | 11:30 AM - 7:30 PM EST
Mar 2 - 6, 2020 | 8:30 AM - 4:30 PM EST

On-Demand Outline

1. Enterprise Connectivity and High-Availability
   - EIGRP OSPF
   - IS-IS
2. BGP Design
   - IBGP
   - BGP Communities
   - Load Sharing
3. Wide Area Network Design
   - Service Provider Managed VPNs
   - Enterprise Managed VPNs
   - WAN Resiliency Design
   - Campus Edge and Connectivity to Partners
   - SDN and APIC-EM
4. Enterprise Data Center Integration
   - Modular and Scalable Data Center Network
   - Multi-Tenant Data Center
   - Data Center Interconnections
   - Data Center Traffic Flows
   - SDN and APIC-DC
5. Designing Security Services
   - Overview
   - Designing Infrastructure Protection
   - Firewall and IPS Solutions
   - Network Access Control Solutions
6. Design QoS for Optimized User Experience
• Overview
• Recommended QoS Design Principles
• Campus QoS
• Data Center QoS
• WAN QoS
• MPLS VPN QoS
• IPSec VPN QoS

7. Transition to IPv6
   • Deploying IPv6 Challenges

8. IP Multicast Design
   • Defining MCAST Trees and Forwarding
   • PIM Sparse Mode
   • Rendezvous Point Distribution Solutions
   • IP Multicast Security

Case Studies

Case Study 1: Design Enterprise Connectivity
Case Study 2: Design Enterprise BGP Network with Internet Connectivity
Case Study 3 Design Resilient Enterprise WAN
Case Study 4: Design Enterprise Data Center Connectivity
Case Study 5: Design a Secure Network
Case Study 6: Design QoS in the Enterprise Network
Case Study 7: Design an Enterprise IPv6 Solution

Note: In the Classroom course, case studies will be team exercises. In the Virtual course, case studies will be individual exercises.
