ADMINISTRATION OF IBM BUSINESS PROCESS MANAGER ADVANCED V8.5.7

Course Code: 5833

Learn how to install, configure, and administer IBM Business Process Manager Advanced V8.5.7.

In this introductory course, you will learn the skills that are needed to install, configure, and administer IBM Business Process Manager Advanced V8.5.7.

This course focuses on IBM Process Server, which is a high-performance business engine at the heart of business process management (BPM) and service-oriented architecture (SOA). The course covers how to configure both Process Center and Process Server in a network deployment environment. You learn about the various deployment topologies that are available for both environments. The course also teaches you about the selection criteria for choosing an appropriate deployment topology. You learn how Business Process Manager uses the service integration bus (WebSphere Platform Messaging) for all asynchronous communications.

To build a highly available Process Server architecture, you must understand how the service integration bus works, and know how to integrate it into the design of a topology. Hands-on exercises on the Ubuntu Linux operating system are provided throughout the course, giving you practical experience with designing, deploying, and troubleshooting a highly available Process Server environment. Through the labs, you configure both Process Center and Process Server in a network deployment environment and verify the configuration. You deploy a basic application and use it to test the capabilities of the Process Server environment. You examine applications in Process Center and deploy applications to both an online and an offline Process Server environment. Finally, you migrate process instances in the Process Server environment.

The exercises in this course run on IBM Business Process Manager Advanced V8.5.7. The lab environment uses the Ubuntu Linux platform.

What You’ll Learn

- Configure and administer a Process Center environment
- Configure and administer a Process Server environment
- Purpose and business value of the tools included in IBM Business Process Manager Advanced V8.5.7: IBM Process Designer, IBM Integration Designer, IBM Process Server, IBM Process Center, and WebSphere Enterprise Service
Bus

- IBM Business Process Manager Advanced architecture, concepts, and terminology
- Deployment considerations for IBM Business Process Manager Advanced components
- Process Server high availability topologies and their selection criteria
- Create a Process Center clustered environment by using the Deployment Environment wizard
- Create a customized properties file by using the IBM Business Process Manager Advanced Configuration Editor
- Create a Process Server clustered environment by using the BPMConfig utility
- Purge content in the Process Center environment
- Purge content in the Process Server environment
- Verify the functions of failover in a clustered environment
- Deploy and manage business applications
- Work with the administrative console and management tools
- Deploy applications to an offline and online Process Server environment
- Migrate process instances
- Implement SSL between the Process Center and Process Server environments
- Troubleshoot the environment

Who Needs to Attend

- Systems administrators
- Solutions administrators and operators

Prerequisites

Before taking this course, you should successfully complete one of the IBM WebSphere Application Server V8.5 Administration courses or IBM WebSphere Application Server V8.5.5 Administration courses. You should also have a general knowledge of:

- The Linux operating system
- Java Platform, Enterprise Edition (Java EE) and Extensible Markup Language (XML)
- Administering multitier business applications
# Administration of IBM Business Process Manager Advanced V8.5.7

VIRTUAL CLASSROOM LIVE  $4,300 CAD  5 days

Virtual Classroom Live Outline

1. Course Introduction
2. Overview of IBM Business Process Manager Advanced
3. IBM Business Process Manager Advanced Installation
4. Exercise: Installing IBM Business Process Manager Advanced
5. IBM Business Process Manager Advanced Architecture Overview
6. IBM Business Process Manager Advanced Components
7. IBM Business Process Manager Advanced Deployment Topologies
8. Exercise: Configuring the Process Center Environment
9. Introduction to IBM Process Center
10. Exercise: Administering Process Center
11. Overview of Process Portal
13. Exercise: Purging Content in Process Center
14. Introduction to IBM Process Server
15. Exercise: Configuring the Process Server Environment
16. Business Process Choreography
17. Application Deployment Concepts
18. Exercise: IBM Process Server Administration
19. Exercise: Purging Content in Process Server
20. Overview of Deployment Scenarios
21. Exercise: Managing Offline and Online Process Servers
22. Exercise: Migrating Process Instances
23. Advanced Administration Concepts
24. Exercise: Advanced Process Server Administration
25. Security
26. Problem Determination
27. Course Summary
