RED HAT JBOSS DATA VIRTUALIZATION DEVELOPMENT (JB450)

Course Code: 0930

This course teaches database developers and administrators how to model data sources and virtual entities such as tables, views, and procedures. Through hands-on labs, you will learn how to deploy these virtual entities for JDBC and web service consumption. This course can also help certification candidates in their preparation for the *Red Hat Certificate of Expertise in Data Virtualization Exam* (EX450).

Note: Global Knowledge and Red Hat do not guarantee that anyone who takes one or all of the courses in the Red Hat certification program will pass a Red Hat exam. On-the-job experience, in combination with high-quality training, is the best way to build skills and prepare for a Red Hat exam. The exam itself is a hands-on learning experience, and many of those who do not pass on the first try come away with knowledge of what they need to work on to pass the exam on a re-take.

What You'll Learn

- Modeling data sources
- Modeling a virtual base layer
- Creating virtual databases (VDB)
- Modeling unions, joins, and virtual procedures
- Modeling and deploying web services
- Server administration
- Developing client applications

Who Needs to Attend

- Database administrators
- Database developers
