SEGRTE201 - IMPLEMENTING SEGMENT ROUTING ON CISCO IOS XR

Course Code: 101136

This course covers the fundamental concepts of segment routing, how to configure and verify segment routing within an Interior Gateway Protocol (IGP), the interworking of Label Distribution Protocol (LDP) with segment routing, how to implement topology-independent loop-free alternate (TI-LFA) using segment routing, and how to instantiate and verify segment routing traffic engineering policies. Students will also learn how to implement segment routing within Border Gateway Protocol (BGP).

This course is eligible for 32 Continuing Education Credits (ILT & ELT Modality).

What You'll Learn

After completing this course, you should be able to:

- Describe the key concepts of segment routing
- Implement and verify IGP segment routing
- Migrate an existing Multiprotocol Label Switching (MPLS) LDP-based network to segment routing
- Implement and verify TI-LFA segment routing
- Instantiate segment routing policies
- Instantiate multidomain segment routing policies
- Configure and verify BGP prefix segments and SR-based services

Who Needs to Attend

Designed for engineers and service providers who are deploying segment routing within their network.

Prerequisites

Attendees should meet the following prerequisites:

- Cisco IOS XR platform and command-line interface (CLI) familiarity

SEGRTE201 - IMPLEMENTING SEGMENT ROUTING ON CISCO IOS XR

Course Code: 101136

VIRTUAL CLASSROOM LIVE	$3,995 USD	4 Day

Oct 19 - 22, 2026 | 9:00 AM - 4:00 PM EDT

SEGRTE201 - IMPLEMENTING SEGMENT ROUTING ON CISCO IOS XR

Course Code: 101136

ON-DEMAND	$750 USD

On-Demand Outline

Introduction to Segment Routing (SR)

- Examining Unified Fabric Routing
- Exploring Segment Routing Concepts
- Examining Segment Types
- Examining the Segment Routing Global Block (SRGB)

IGP Segment Routing Implementation and Verification

- Examining the IGP Control Plane
- Examining SRGB and IGP Interactions
- Examining Prefix and Adjacency Segment Identifiers
- Intermediate System to Intermediate System Multilevel and Open Shortest Path First (OSPF) Multi-Area
- Configuring and Verifying IS-IS SR Operation
- Configuring and Verifying OSPF SR Operation

Segment Routing and LDP Interworking

- SR and LDP Interworking Data Plane
- Mapping Server Function and Configuration
- Interworking Deployment Models

Topology Independent -Loop Free Alternate

- Examining Classic LFA
- Examining TI-LFA Fundamentals
- Implementing and Verifying TI-LFA for SR Traffic
- Implementing and Verifying TI-LFA for LDP Traffic
- TI-LFA and SR/LDP Interworking

Segment Routing Policies - Traffic Engineering (SR-TE)

- Exploring SR Policies
- Introducing the Anycast and Binding SIDs
- Enabling and Verifying SR Policies

- Instantiating SR Policies
- Instantiating SR Policies Using BGP Dynamic

Multidomain SR Policies

- Configuring and Verifying a Path Computation Element (PCE)
- Configuring and Verifying BGP Link State (BGP-LS)
- Configuring Multidomain SR Policies with a PCE
- Configuring Multidomain SR Policies with On-Demand Next Hop (ODN)
- Segment Routing - Based Services
- Examining the BGP Prefix - SID Operation
- Configuring and Verifying the BGP Prefix SID
- Examining Egress Peer Engineering
- Examining the BGP Prefix-SID Operation
- SR Flexible Algorithm and Performance Measurement (PM) Delay
- SR-Enabled VPNs

On-Demand Labs

- Lab 1: Configuring and Verifying IGP Segment Routing
- Lab 2: Migrating from LDP to Segment Routing
- Lab 3: Configuring and Verifying TI-LFA Fast Reroute
- Lab 4: Configuring and Verifying SR Policies
- Lab 5: Configuring and Verifying Multidomain SR-TE
- Lab 6: Configuring and Verifying BGP Segment Routing
