

RISK MANAGEMENT FOR BUSINESS ANALYSTS AND BUSINESS SYSTEMS ANALYSTS

Course Code: 2131

As a business analyst or business systems analyst, we are encountering project risk daily. It is important to understand those risks and properly manage them to help support project success.

In this course, you will obtain a better understanding of your role as a business analyst in both project and requirements risk identification and management. You will learn to adopt a more proactive approach to risk management instead of fighting fires as they occur. Through hands-on exercises, you will discover tools and techniques to elicit and manage risks with your stakeholders and increase the chances of project success.

What You'll Learn

- Relationships between assumptions, constraints, dependencies, issues, and risks
- Business analyst role in project risk management
- Business analyst role in requirements risk management
- Overcome resistance from stakeholders and team members
- Identifying risk
- Qualify and quantify risks
- Plan risk responses
- Monitor and control risks

Who Needs to Attend

Systems analysts, business analysts, requirements analysts, developers, software engineers, IT project managers, project managers, project analysts, project leaders, senior project managers, team leaders, program managers, testers, and QA specialists
