CLOUD WORKLOAD PLANNING

Course Code: 6033

Learn the essentials of cloud migration.

This course is designed to take delegates through the cycle of identifying potential cloud workloads and their stakeholders, establishing a planning team, determining goals and requirements, through building and executing a migration plan. Students will learn about different cloud service and hosting models, and will have the information required to recommend what architecture will work best for their organization.

What You'll Learn

This is a high level course that is appropriate for both business leaders and technical audiences.
This course will help you plan for the unexpected surprises that often appear during cloud workload migrations by:

- Exploring different design aspects that should be considered when planning a workload migration to the cloud
- Discussing the design impact of a multitude of workload considerations
- Gathering critical design information from a case study
- Identify missing information in a migration plan
- Explain how to gather missing information and how it could impact the migration process

Who Needs to Attend

All IT professionals, IT project managers, IT managers, IT project or team members, coordinators, network operators, business process analysts, IT architects, consultants, systems integrators, help desk managers and staff, planners, managed service providers, outsourcers, application developers, and other IT-related positions.
