

SHAREPOINT 2016 FOR ADVANCED SITE OWNERS AND WORKFLOW ADMIN

Course Code: 6902

Learn how to determine what features and options to make available in SharePoint to meet organizational and user needs.

Microsoft® SharePoint® 2016 helps people collaborate and use familiar applications and web-based tools to create, access, store, and track documents and data in a central location. SharePoint can also help organizations segment digital information, share information from external sources, archive records, and automate business processes. In this course, you will learn how to create, configure, and manage a SharePoint site so that your team or organization can collaborate effectively, manage the flow of digital information, automate business processes, and meet records management needs.

SharePoint features are robust and complex. Site owners can determine what features and options to make available in SharePoint and how to configure those features to meet organizational and user needs. By properly implementing these features, users will be able to collaborate effectively, and organizations will save time and money through automation of business processes, fast and efficient retrieval of information, and effective records management.

What You'll Learn

Upon successful completion of this course, existing SharePoint site owners will be able to take on administrative responsibility for implementing and managing advanced features based on business requirements.

You will:

- Configure site settings
- Integrate external applications and data
- Configure site metadata
- Manage archiving and compliance
- Implement workflows

Who Needs to Attend

This course is designed for existing Microsoft SharePoint site owners who will create and manage sites, add advanced features, implement and manage records

management, and create and administer workflows.
