

# VMWARE WORKSPACE ONE: DEPLOY AND MANAGE PLUS UEM TROUBLESHOOTING FAST TRACK [V22.X]

Course Code: 821460

Learn how to apply the fundamental techniques for launching and maintaining an intelligence-driven, multi-platform endpoint management solution with Workspace ONE UEM.

In this extended five-day course, you learn how to apply the fundamental techniques for launching and maintaining an intelligence-driven, multi-platform endpoint management solution with Workspace ONE UEM. Through a combination of hands-on labs, simulations, and interactive lectures, you will configure and manage the endpoint lifecycle. You will have the foundational knowledge for effectively implementing Workspace ONE UEM.

Also, you learn how to apply the fundamental techniques for integrating VMware Workspace ONE® Access™ with Workspace ONE UEM to distribute business-critical applications from any device securely and configure access management controls. Through a combination of hands-on labs, simulations, and interactive lectures, you configure Workspace ONE Access, enterprise, and productivity integrations. You will leave with a foundational understanding of how Workspace ONE uses various authentication methods and protocols to determine user access permissions and enable single sign-on. You learn the foundational principles of identity and access management.

Finally, you learn to investigate, analyze, and determine issues that might occur with all the different components of VMware Workspace ONE® UEM. Understanding how to effectively troubleshoot product issues enables administrators to understand how product services communicate and function, optimizing service and software health management. Troubleshooting is the backbone of service maintenance and management.

## What You'll Learn

By the end of the course, you should be able to meet the following objectives:

- Explain the general features and functionality enabled with Workspace ONE

## UEM

- Summarize essential Workspace ONE administrative functions
