

# SCOPING & SCHEDULING SUCCESSFUL PROJECTS

Course Code: 821776

Learn the tools and techniques necessary to determine and deliver products, services, and results that meet requirements, expectations, and deadlines.

Accurately defining project scope sets the foundation for a successful project that accomplishes organizational needs. Research has shown that substandard requirements and scoping techniques often result in projects exceeding their planned budgets by as much as 200%. Additionally, generating a realistic schedule based on accurate resource and duration estimates troubles even the most senior project managers. This course, based on PMI®'s PMBOK® Guide, Sixth Edition, provides participants with the tools and techniques to help them determine and deliver products, services, and results that meet requirements, expectations, and deadlines.

## What You'll Learn

Upon successful completion of the Scoping and Scheduling Successful Projects Training, you will be able to:

- Understand Project Scope Mgt. Processes and Key Outputs
- Requirements, Scope, and Negotiations
- The Scope Management Planning Process
- The Requirements Management Planning Process
- Monitor and Control processes

## Who Needs to Attend

Project managers, project team leads, and project team members (with or without a currently-active PMI certification) who want to gain a deeper understanding of and hands-on experience with project scope and schedule tools, techniques, and outputs, as documented in the PMBOK® Guide, Seventh Edition.

## Prerequisites

To ensure that you benefit fully from this course, you should have experience managing, leading, or contributing to projects. A PMI project-management credential such as PMP® or CAPM® is recommended but not required.
