

DEVOPS INSTITUTE: DEVSECOPS PRACTITIONER

Course Code: 831015

Explore practical outcomes through finding the right mix of people, building processes to accelerate value, and comparing technological options using a range of practices introduced in this course.

The DevSecOps Practitioner course is intended as a follow-on to the DevSecOps Foundation course. The course builds on previous understanding to dive into the technical implementation. Each section highlights useful metrics as well as integrating new techniques into differing practices. This course explains how to overcome people, process, and technological issues to develop better DevSecOps outcomes. Beginning with a deeper dive into the surrounding concepts, the course then considers either using existing metrics or developing unique expressions suitable to each DevOps experience. The middle section looks at architecture transitions, building an infrastructure, and tuning the CI/CD pipeline to the best effect. Finally, the course offers ways to get the best from your experimentation practices and considers where the future of DevSecOps may lead.

The DevsecOps Practitioner course introduces more advanced ways to explore DevSecOps in your organization. Each section covers practical maturity guides, and then discusses how people, process and technology can be combined to improve outcomes.

The course aims to equip participants with the practices, methods, and tools to engage people across the organization involved in reliability through real-life scenarios and case stories. Upon completion of the course, participants will have tangible takeaways to leverage when back in the office such as implementing DevSecOps Practices to their organization structure, building better pipelines in distributed systems, and having a common technological language.

The course is developed by leveraging key DevSecOps sources, engaging with thought-leaders in the space and working with organizations to extract real-life best practices and has been designed to teach the key principles & practices necessary for successful DevSecOps practices.

This course positions learners to successfully complete the DevSecOps Practitioner certification exam.

What You'll Learn

At the end of the course, the participants would learn to:

- Comprehend the underlying principles of DevSecOps
- Distinguish between the technical elements used across DevSecOps practices
- Demonstrate how practical maturity concepts can be extended across multiple areas.
- Implement metric-based assessments tied to your organization.
- Recognize modern architectural concepts including microservice to monolith transitions.
- Recognize the various languages and tools used to communicate architectural concepts.
- Contrast the options used to build a DevSecOps infrastructure through Platform as a Service, Server-less construction, and event-driven mediums
- Prepare hiring practices to recognize and understand the individual knowledge, skills, and abilities required for mature Dev.
- Identify the various technical requirements tied to the DevSecOps pipelines and how those impact people and process choices.
- Review various approaches to securing data repositories and pipelines.
- Analyze how monitoring and observability practices contribute to valuable outcomes.
- Comprehend how to implement monitoring at key points to contribute to actionable analysis.
- Identify future trends that may affect DevSecOps

Who Needs to Attend

- Anyone focused on implementing or improving DevSecOps practices in their organization
- Anyone interested in modern IT leadership and organizational change approaches
- Business Managers
- Business Stakeholders
- Change Agents
- Consultants
- DevOps Practitioners
- IT Directors
- IT Managers
- IT Team Leaders
- Product Owners
- Scrum Masters
- Software Engineers
- Site Reliability Engineers
- System Integrators
- Tool Providers

Prerequisites

It is highly recommended that learners attend the DevSecOps Foundation course prior to attending the DevSecOps Practitioner course. An understanding and knowledge of common DevSecOps terminology, concepts, principles, and related work experience are recommended.

**Please note: The DevOps Institute DevSecOps Foundation certification is a prerequisite to the DevSecOps Practitioner exam.*
