

# JIRA AND AGILE PROJECTS

Course Code: 831251

Jira and Agile Projects training helps you to align agile practices, roles, and ceremonies with the Jira environment. Return to work ready to use Jira to manage technology projects, IT service delivery, and agile software development.

## **Use Jira for executing everyday agile project work.**

This fast-paced, hands-on workshop teaches you how to manage agile projects, products, and development work using Atlassian Jira as your primary collaboration platform. In Jira, you have a tool designed to enable agile practices and track agile projects across a wide range of scenarios. Features such as issue tracking, search, reporting, and customization allow for seamless integration of agile projects in one project management environment. No other agile project management tool offers the depth of agile context and comprehensive agile framework that Atlassian has made available with JIRA.

## **Get up to speed on Jira quickly and go back to work ready to practice true agility.**

This course teaches agile team members on how to use all of Jira's primary features to support an agile practice. In two fast-paced days, you will get experience with issues, requirements, product delivery, reporting, and tracking. You'll learn to use Jira to support sprint planning, stories, backlog management, and kanban boards (when necessary). After taking this boot camp, you'll get back to work ready to embrace agile practices using one unified tool, and one unified set of concepts.

## What You'll Learn

By the end of this course, attendees will learn how to:

- Use Jira as a comprehensive platform for managing agile projects
- Support your application/IT service life cycles and agile ceremonies/workflows using Jira
- Map team member roles to Jira: Scrum teams, project managers, and product owners
- Explain the basic parts of a Jira project & how they are organized
- Run sprints and manage requirements, issues, backlogs and deliveries
- Search for Jira issues and save your search queries for re-use
- Use different types of agile boards and project formats

- Efficiently rank and organize issues in the Jira backlog
- Apply different agile board templates such as scrum and Kanban
- Report on and interpret Jira data using built-in agile reports and Jira dashboards

## Who Needs to Attend

This Jira training course is tailored for anyone looking to expertly manage their SDLC with the one comprehensive tool. Some roles that would find this course useful include:

- Agile Practitioners
- Project Managers
- Scrum Masters
- Product Owners
- Program Managers
- Analysts
- Developers / Programmers
- Testers
- IT Manager/Directors
- Customers/Stakeholders
- Product Managers

## Prerequisites

Anyone looking to expertly manage their SDLC with the one comprehensive tool is eligible for this training course.
