

MIGRATING VIRTUAL MACHINES TO RED HAT OPENSIFT VIRTUALIZATION WITH ANSIBLE AUTOMATION PLATFORM (DO346)

Course Code: 832024

DO346- Learn the essential skills to migrate virtual machines to Red Hat OpenShift Virtualization.

Migrating Virtual Machines to Red Hat OpenShift Virtualization with Ansible Automation Platform (DO346) provides the essential knowledge to migrate virtual machines to Red Hat OpenShift Virtualization by using carefully selected content from Managing Virtual Machines in Red Hat OpenShift Virtualization (DO316) and Automate and Manage Red Hat OpenShift Virtualization with Ansible (DO336).

This course provides a shorter learning path for IT professionals to migrate their virtualized workloads to OpenShift Virtualization.

This course provides the following information and skills:

- An introduction to key OpenShift and Kubernetes concepts, such as nodes, pods, and operators
- Skills to deploy the OpenShift Virtualization operator
- Skills to configure networking and storage for virtual machines
- Strategies to migrate virtual machines from another hypervisor to OpenShift Virtualization by using the migration toolkit for virtualization operator and Ansible Automation Platform

This course is based on OpenShift Container Platform 4.16, OpenShift Virtualization 4.16, and Ansible Automation Platform 2.4.

Note: This course is offered as a 2-day in-person class, a 3-day virtual class, or is self-paced.

Red Hat Learning Subscription COURSE – Included with Your Purchase

Starting January 1, 2026, Red Hat introduces RHLS-Course—a flexible subscription model now included with this catalog offering. This replaces the previous direct virtual class enrollment from Global Knowledge.

When you purchase this item, you'll receive an RHLS subscription at the course level, giving you the freedom to choose the schedule that works best and self-enroll in your selected class.

Your RHLS subscription includes:

- One live, instructor-led virtual session
- 12 months of self-paced learning access
- One certification exam with a free retake

Onsite Classroom-based sessions and closed course options remain unchanged.

What You'll Learn

After completing this course, learners should be able to:

- Deploying the OpenShift Virtualization operator in an existing Red Hat OpenShift environment
- Configuring node networking to connect virtual machines and nodes to networks outside the cluster by using Multus CNI plug-ins and the NMState operator
- Managing storage and disks for virtual machines in Red Hat OpenShift
- Migrating virtual machines from another hypervisor to Red Hat OpenShift Virtualization by using the migration toolkit for virtualization operator and Ansible Automation Platform

Who Needs to Attend

- Virtual Machine Administrators who are interested in moving virtualized workloads from traditional hypervisors to OpenShift Virtualization
- Kubernetes Administrators (Cluster Administrators and Cluster Engineers) who are interested in supporting containerized and virtualized workloads in the same OpenShift cluster

Prerequisites

This course requires no previous experience with containers, Kubernetes, OpenShift, or OpenShift Virtualization; however, learners are encouraged to attend the following courses, before taking DO346:

- Containers, Kubernetes and Red Hat OpenShift Technical Overview (DO080)
- Red Hat OpenShift Virtualization Technical Overview (DO016)
- Ansible Basics: Automation Technical Overview (DO007)

Although Linux skills are not required for managing OpenShift clusters and OpenShift Virtualization, operating individual Linux VMs requires Linux system administration skills that the following courses provide (or equivalent working knowledge):

- Red Hat System Administration I (RH124)
- Red Hat System Administration II (RH134)

for managing the operating system inside a Linux VM

Confirmation of the correct skill set knowledge can be obtained by passing the online skills assessment at [Red Hat Skills Assessment](#)

MIGRATING VIRTUAL MACHINES TO RED HAT OPENSIFT VIRTUALIZATION WITH ANSIBLE AUTOMATION PLATFORM (DO346)

Course Code: 832024

VIRTUAL CLASSROOM LIVE \$2,350 USD

1 Session

Virtual Classroom Live Outline

1. **Red Hat OpenShift Virtualization**

Distinguish Red Hat OpenShift Virtualization from container technologies and from traditional virtual machine technologies. Describe the features and use cases of OpenShift Virtualization. Deploy the OpenShift Virtualization operator in an existing Red Hat OpenShift environment.

2. **Configuring Networking for Virtual Machines**

Configure standard Kubernetes network objects for virtual machines and virtual machine-backed applications. Configure node networking to connect virtual machines and nodes to networks outside the cluster by using Multus CNI plug-ins and the NMState operator.

3. **Configuring Storage for Virtual Machines**

Manage storage and disks for virtual machines in Red Hat OpenShift by using Kubernetes.

4. **Migrating Virtual Machines to Red Hat OpenShift Virtualization**

Migrate virtual machines from a compatible hypervisor to Red Hat OpenShift Virtualization by using the migration toolkit for virtualization (MTV) operator and the Ansible Automation Platform (AAP) operator.

Jun 29 - 30, 2026 | 10:30 AM - 6:30 PM EDT

Nov 9 - 10, 2026 | 10:30 AM - 6:30 PM EST

MIGRATING VIRTUAL MACHINES TO RED HAT OPENSIFT VIRTUALIZATION WITH ANSIBLE AUTOMATION PLATFORM (DO346)

Course Code: 832024

ON-DEMAND

\$2,350 USD

On-Demand Outline

1. **Red Hat OpenShift Virtualization**

Distinguish Red Hat OpenShift Virtualization from container technologies and from traditional virtual machine technologies. Describe the features and use cases of OpenShift Virtualization. Deploy the OpenShift Virtualization operator in an existing Red Hat OpenShift environment.

2. **Configuring Networking for Virtual Machines**

Configure standard Kubernetes network objects for virtual machines and virtual machine-backed applications. Configure node networking to connect virtual machines and nodes to networks outside the cluster by using Multus CNI plug-ins and the NMState operator.

3. **Configuring Storage for Virtual Machines**

Manage storage and disks for virtual machines in Red Hat OpenShift by using Kubernetes.

4. **Migrating Virtual Machines to Red Hat OpenShift Virtualization**

Migrate virtual machines from a compatible hypervisor to Red Hat OpenShift Virtualization by using the migration toolkit for virtualization (MTV) operator and the Ansible Automation Platform (AAP) operator.
