

DEPLOY CLOUD-NATIVE APPS USING AZURE CONTAINER APPS (AZ-2003)

Course Code: 834044

Develop the skills necessary to configure a secure deployment solution for cloud-native apps using Azure container Apps.

Learn how to build, deploy, scale, and manage containerized cloud-native apps using Azure Container Apps, Azure Container Registry, and Azure Pipelines.

What You'll Learn

Students will learn to,

- Get started with cloud native apps and containerized deployments
- Configure Azure Container Registry for container app deployments
- Configure a container app in Azure Container Apps
- Configure continuous deployment for container apps
- Scale and manage deployed container apps
- Guided project - Deploy and manage a container app using Azure Container Apps

Who Needs to Attend

Students wishing to learn the skills necessary to configure a secure deployment solution for cloud-native apps.

Prerequisites

- Basic understanding of cloud computing concepts: Familiarity with cloud computing fundamentals, such as virtualization, scalability, and on-demand resource provisioning.
- Knowledge of containers: Understanding the concept of containers, their benefits, and how they differ from traditional apps and virtual machines.
- Familiarity with container orchestration: Basic understanding of container orchestration platforms like Kubernetes and their role in managing containerized applications.
- Experience with Azure: Some familiarity with Microsoft Azure and its core container services, such as Azure Container Registry, Azure Kubernetes Service, and Azure Container Apps.
- Experience with deployments: Some familiarity with Azure DevOps or similar CI/CD tools for application deployment.
- Experience with networks: Some familiarity with networking concepts and Azure Virtual Networks.

DEPLOY CLOUD-NATIVE APPS USING AZURE CONTAINER APPS (AZ-2003)

Course Code: 834044

CLASSROOM LIVE

\$675 USD

1 Day

Classroom Live Outline

Module 1: Get started with cloud native apps and containerized deployments

- This module provides an introduction to cloud-native applications, the benefits of containerized deployments, the options for containerized deployments on the Azure platform, and the features of Azure Container Apps.

Module 2: Configure Azure Container Registry for container app deployments

- This module teaching users how to set up and configure an Azure Container Registry for deploying containerized applications to Azure Container Apps.

Module 3: Configure a container app in Azure Container Apps

- This module examines the features and capabilities of Azure Container Apps, and then focuses on how to create, configure, scale, and manage container apps using Azure Container Apps.

Module 4: Configure continuous deployment for container apps

- This module explores deployment options for containerized apps. It reviews the features of Azure DevOps and examines automated deployments to Container Apps using Azure Pipelines.

Module 5: Scale and manage deployed container apps

- This module reviews the concept of revisions in Azure Container Apps and examines options for application lifecycle management. It also examines options for scaling and traffic splitting using Azure Container Apps.

Module 6: Guided project - Deploy and manage a container app using Azure Container Apps

- This module guides learners through the end-to-end process of building, deploying, and managing containerized applications using Azure Container Apps, Azure Container Registry, Azure Pipelines, and other tools and resources.
