

# IMPLEMENT DATA ENGINEERING SOLUTIONS USING AZURE DATABRICKS (DP-750)

Course Code: 834130

Design and deliver scalable data pipelines using Azure Databricks and the lakehouse architecture.

This course moves from foundational setup to production deployment, covering environment configuration and enterprise-grade governance. Learn to build robust ingestion pipelines, implement security with Unity Catalog, and deploy optimized workloads. By the end, you will have the practical skills to implement, secure, and maintain scalable lakehouse solutions that meet rigorous enterprise requirements.

## What You'll Learn

By the end of this course, learners will be able to:

- Configure and manage Azure Databricks environments, including workspaces, clusters, and compute resources.
- Ingest, transform, and model data using SQL and Python to support analytics and downstream workloads.
- Build, deploy, and maintain scalable data pipelines using Azure Databricks and lakehouse patterns.
- Apply data governance and security best practices using Unity Catalog for access control, governance, and data quality.
- Integrate Azure Databricks with core Azure services, including Azure Storage, Azure Data Factory, Azure Monitor, Microsoft Entra ID, and Azure Key Vault.
- Troubleshoot, monitor, and optimize Databricks workloads to ensure reliable, production-ready data engineering solutions.

## Who Needs to Attend

The target audience is data engineers who have fundamental knowledge of data analytics concepts, a basic understanding of cloud storage, and familiarity with data organization principles. They should be comfortable working with SQL and have experience using Python, including notebooks, for data engineering tasks. Learners are expected to have a good understanding of Azure Databricks workspaces and Unity Catalog, along with familiarity with data access patterns and core data engineering and data warehouse concepts. In addition, they should have foundational knowledge of Azure security, including Microsoft Entra ID, and be familiar with Git version control fundamentals.

# IMPLEMENT DATA ENGINEERING SOLUTIONS USING AZURE DATABRICKS (DP-750)

Course Code: 834130

CLASSROOM LIVE

\$2,595 CAD

4 Day

## Classroom Live Outline

### **Module 1: Set up and configure an Azure Databricks environment**

- Explore Azure Databricks
- Understand Azure Databricks architecture
- Understand Azure Databricks Integrations
- Select and Configure Compute in Azure Databricks
- Create and organize objects in Unity Catalog

### **Module 2: Secure and govern Unity Catalog objects in Azure Databricks**

- Secure Unity Catalog objects
- Govern Unity Catalog objects

### **Module 3: Prepare and process data with Azure Databricks**

- Design and implement data modeling with Azure Databricks
- Ingest data into Unity Catalog
- Cleanse, transform, and load data into Unity Catalog
- Implement and manage data quality constraints with Azure Databricks

### **Module 4: Deploy and maintain data pipelines and workloads with Azure Databricks**

- Design and implement data pipelines with Azure Databricks
- Implement Lakeflow Jobs with Azure Databricks
- Implement development lifecycle processes in Azure Databricks
- Monitor, troubleshoot and optimize workloads in Azure Databricks

4 Day

## Virtual Classroom Live Outline

### **Module 1: Set up and configure an Azure Databricks environment**

- Explore Azure Databricks
- Understand Azure Databricks architecture
- Understand Azure Databricks Integrations
- Select and Configure Compute in Azure Databricks
- Create and organize objects in Unity Catalog

### **Module 2: Secure and govern Unity Catalog objects in Azure Databricks**

- Secure Unity Catalog objects
- Govern Unity Catalog objects

### **Module 3: Prepare and process data with Azure Databricks**

- Design and implement data modeling with Azure Databricks
- Ingest data into Unity Catalog
- Cleanse, transform, and load data into Unity Catalog
- Implement and manage data quality constraints with Azure Databricks

### **Module 4: Deploy and maintain data pipelines and workloads with Azure Databricks**

- Design and implement data pipelines with Azure Databricks
- Implement Lakeflow Jobs with Azure Databricks
- Implement development lifecycle processes in Azure Databricks
- Monitor, troubleshoot and optimize workloads in Azure Databricks
