

# ANALYSIS AND PROBLEM SOLVING FOR CONSULTANTS (CO20)

Course Code: 8964

Understand critical aspects of a consulting engagement, emphasizing a collaborative problem-solving approach to the client/consultant relationship.

As clients' problems become more complex, and the desire to implement solutions that not only meet needs but deliver true business value increases, technical consultants need to develop a more in-depth understanding of their clients in order to be successful. This shift combined with the fact that the solutions many organizations or internal support functions offer are also becoming broader and include more services means that technical consultants have to have business acumen and better problem solving and analysis skills.

This is an interactive workshop that helps both internal and external consultants build the skills and knowledge to better gather and analyze client information and make sense of it in order to make more effective recommendations.

## What You'll Learn

- Understand your client, whether internal or external, and the context for the consulting engagement
- Gather data to clarify the issue, opportunity, or problem to be addressed
- Define success criteria
- Analyze the gap between current and desired results
- Develop and assess alternative solutions or actions
- Select an optimal solution or action
- Develop recommendations to present to your client

## Who Needs to Attend

**Anyone in an internal or external consulting role**

**Project managers**

**Business analysts**

**IT professionals**

**Engineers**

**Other technical professionals who would like to improve the outcomes of their consulting engagements by:**

- Collecting the right data from the right stakeholders
- Effectively analyzing the data they collect
- Identifying the right solutions
