

IBM BUSINESS AUTOMATION WORKFLOW 23.0.2: ADVANCED ROUTING, INTEGRATIONS, AND ERROR HANDLING

Course Code: 900106

In this advanced one-day course, you implement advanced routing and integrate your process application with external systems.

In this advanced one-day course, you implement advanced routing and integrate your process application with external systems.

You create a decision service, implement message events, apply asset tagging, and access and manipulate external data.

You integrate your process application with a database and learn about exposed process variables (EPVs) and environment variables (ENVs).

You develop a catch exception and implement error handling in a service. You add advanced routing capabilities to your process application by using team filter services and implement a "four eyes" policy.

What You'll Learn

After completing this course, learners should be able to:

- Create a decision service
- Create and configure a UCA
- Start a process with a message start event
- Query a database to obtain information and populate a list variable
- Create environment variables (ENVs) and exposed process variables (EPVs)
- Catch an error in a process or service
- Harden a service with a catch exception component
- Implement the "four eyes" policy by using a team filter

Who Needs to Attend

- This course is designed for project members who design and implement detailed logic, data models, and external system integrations for an executable business process.
- These roles include process owners, BPM analysts, BPM authors, BPM developers, BPM administrators, and BPM project managers.

Prerequisites

Before taking this course, you should have:

- Practical knowledge of data structures
- Understanding of SQL syntax and JavaScript
- Basic understanding of web services
- Experience with modern programming techniques

IBM BUSINESS AUTOMATION WORKFLOW 23.0.2: ADVANCED ROUTING, INTEGRATIONS, AND ERROR HANDLING

Course Code: 900106

VIRTUAL CLASSROOM LIVE

\$950 USD

1 Day

Virtual Classroom Live Outline

- Course introduction
- Unit 1: Integrations
- Exercise 1. Integrations
- Unit 2. Error handling and deployment
- Exercise 2. Handling errors and deploying your process application
- Unit 3. Advanced routing
- Exercise 3. Implementing a custom routing solution
- Exercise 4. Implementing the - four eyes- policy by using a team filter
- Course summary

Virtual Classroom Live Labs

- Labs are provided by IBM
