

IBM I SYSTEM ADMINISTRATION

Course Code: 9082

IBM Course Code: OL190CE

Learn how to plan for, implement, and manage the ongoing operations of an IBM i. Emphasis is on security, system availability, backup and recovery, system software management, and problem determination. Also, get an introduction to the architecture and terminology of the IBM i.

What You'll Learn

- Describe and implement the components of IBM i security, such as user profile, group profile, authorization list, adopted authority and object / resource security
- Develop a security plan for your IBM i
- Describe the options to implement security auditing
- Develop a plan to audit security on your IBM i
- Describe the IBM i availability products and features and choose the option(s) that best fit your company requirements
- Describe how to backup and recover user, IBM and full system data on the IBM i
- Develop a backup and recovery plan for your IBM i
- Describe the system diagnostics and problem determination procedures available on the IBM i

Who Needs to Attend

This is an intermediate course intended for IBM i system administrators, data processing managers and other individuals who implement and manage security, backup and recovery, system software and problem determination. This course is not recommended for system operators.

Prerequisites

You should:

- complete System Operator Workshop for IBM i (AS240)
- have responsibility for implementing the security features available for IBM i
- have responsibility for the implementation of a backup and recovery plan and system availability for your Power Systems with IBM i
